

## *Aerial Photography*

by Joe Gilbert

A number of members have expressed interest in attaching a camera to their aircraft for live action. I do quite a lot of this and will pass along information regarding those I use.

On RCGroups in the Aerial Photography Forum (<http://www.rcgroups.com/aerial-photography-128/>), there is a great amount of info available on most of these (not the FlyCamOne). Look for threads moderated by Tom Frank for info on the Keychain 808#16 V2 (<http://www.rcgroups.com/forums/showthread.php?t=1556994>) and Mobius (<http://www.rcgroups.com/forums/showthread.php?t=1904559>) cameras.

The Mobius & 808#16 V2 have upgradeable firmware (programming) and you can get a utility for your PC to assist you with any upgrades and also to set options. Great stuff!

One big recommendation from Tom is to buy from a dealer KNOWN to sell original versions from the manufacturer, not cheap clones! I bought my 808s and Mobius cameras from MassiveRC in Fl., a recommended reseller. (<http://www.massiverc.com/PrestaShop/en/>) Fair prices and great service. The 808#16s are just under \$50 and the Mobius is \$80.

These 808#16 V2 take some great video and there are a number of videos I posted on youtube I made using them. The Mobius is a bit bigger and has more options and is really great as you can select 60fps to eliminate jello (vibration effects) in the video. Especially useful on quadcopters.

At the moment, my favorite is the Mobius but if you want a really small camera to mount out on the wing or tail, try the 808#16 V2.

And take a look at the info below on Bob's new E-flite camera!

Below is a youtube "playlist" that contains all the videos/slideshows I made with cameras mounted on the aircraft.
